Profile Summary

Automation Engineer with 3+ years of experience in designing and implementing scalable API and UI automation frameworks using Java, Karate, Playwright, and Selenium. Strong expertise in CI/CD integration with GitHub Actions and Azure DevOps, cloud-based execution on AWS, and authentication workflows (JWT/OAuth). Experienced in backend validation, microservices architecture, and DevOps-driven automation strategies. Passionate about building high-quality, scalable systems with a development-oriented mindset.

Technical Skills

Programming: Java (Primary), Python (Basic), C
Automation & Testing: Karate, Playwright, Selenium, Cucumber, TestNG, JUnit4, Postman, Bruno
Core Concepts: OOP, Data Structures & Algorithms, RESTful APIs, Microservices, JWT/OAuth Authentication
Backend Frameworks: Spring Boot, Hibernate
Cloud: AWS (EC2, CloudWatch, S3), Azure, Git hub workflows, Jenkins, CI/CD pipelines**,** Docker, Pipeline Automation
Databases: PostgreSQL, MySQL
Version Control: Git

Professional Experience

Comtek International Inc., Chicago, IL
Full-Time Contractor | June 2023 –Feb 2025
Customer Master – API Automation

- Engineered REST API automation framework using Java & Karate integrated with AzDo CI/CD pipelines.
- Automated authentication mechanisms with dynamic token generation and environment-based configurations.
- Reduced manual regression effort by 60% by automating critical business workflows.
- Integrated AWS services for test data management and automated result reporting.
- Improved automation stability by debugging complex data flow and backend validation issues.

ED-Retirement – API Validation

- Automated onboarding workflows including asset registration, dealer attachment, and IoT gateway integration.
- Validated complex rule-based data transformations across distributed services.
- Enhanced API validation coverage ensuring high reliability of backend systems.

CUOB UI – Frontend Automation

- Architected scalable UI automation framework using Playwright (Java) following Page Object Model
- Implemented parallel test execution, dynamic waits, and retry mechanisms to reduce flaky tests.
- Automated role-based workflows and email-triggered user creation flows, reducing validation time by 40%.
- Integrated regression suite with GitHub Actions for nightly automated builds.
- Performed log-level validation using AWS CloudWatch for production-level debugging.

AI Infotech, Chennai
Full-Time Employee | March 2025 – March 2026
Foresight – Automation & Data Validation

- Validated asset-based fault, fluid, and operational data through API-level automation testing.
- Contributed to CI/CD integration and pipeline stability improvements.
- Performed backend validation using Postman and AWS-based data sources.
- Collaborated with cross-functional teams in Agile development cycles.

Achievements

- Identified and validated 100+ high-impact UI & API defects across enterprise Caterpillar applications.
- Migrated legacy SIT automation pipelines to GitHub Actions, improving build reliability and visibility.
- Designed secure authentication workflows improving automation efficiency**.**
