PROFESSIONAL SUMMARY

QA Automation Engineer with 3+ years of experience building scalable API and UI automation frameworks for enterprise-grade applications. Delivered automation solutions for Caterpillar Inc. across dealer portals, parts platforms, IoT asset management, and internal tools. Proficient in Java, Karate, Playwright, and Selenium with hands-on CI/CD experience using Azure DevOps and GitHub Actions. Strong background in BDD, microservices validation, JWT/OAuth authentication workflows, and cloud-based test execution on AWS.

TECHNICAL SKILLS

Languages	Java (Primary), JavaScript, Python (Basic)
Automation	Karate, Playwright (Java), Selenium WebDriver, Cucumber (BDD), TestNG, JUnit4
API Testing	Postman, Bruno, REST Assured, Karate DSL
CI/CD & DevOps	Azure DevOps (ADO), Azure Pipelines, GitHub Actions, Jenkins, Docker
Cloud	AWS (EC2, S3, CloudWatch), Azure
Bug & Work Tracking	Azure DevOps (ADO) – Bug Tracking, Test Plans, Work Items
Documentation	Confluence, Figma (design review)
Databases	PostgreSQL, MySQL
Other	Git, Spring Boot, Hibernate, JWT/OAuth, Page Object Model, Microservices

PROFESSIONAL EXPERIENCE

QA Automation Engineer

Mar 2025 – Mar 2026

AI Infotech | Chennai, India | Client: Caterpillar Inc.

Project: Foresight – Asset Data Validation & Automation

- Validated asset-based fault, fluid, and operational data through API-level automation using Karate and Postman, ensuring accuracy of IoT data pipelines.
- Contributed to CI/CD pipeline setup and stability improvements using GitHub Actions, enabling consistent automated test runs across environments.
- Performed backend data validation against AWS-based data sources (S3, CloudWatch) to verify data integrity across distributed services.
- Collaborated with cross-functional Agile teams using Azure DevOps for sprint planning, work item tracking, and defect management.
- Documented test plans, coverage reports, and defect summaries in Confluence for stakeholder visibility.

QA Automation Engineer

Jun 2023 – Feb 2025

COMTEK International Inc. | Chicago, IL (Remote) | Client: Caterpillar Inc.

Project: Customer Master – API Automation

- Engineered a REST API automation framework using Java & Karate, integrated with Azure DevOps CI/CD pipelines for continuous test execution.
- Automated JWT/OAuth-based authentication workflows with dynamic token generation and environment-based configurations.
- Reduced manual regression effort by 60% by automating critical business workflows across the Customer Master platform.
- Integrated AWS services (S3, CloudWatch) for test data management and automated result reporting.

Project: ED-Retirement – API Validation

- Automated dealer onboarding workflows including asset registration, dealer attachment, and IoT gateway integration using Karate.
- Validated complex rule-based data transformations across distributed microservices, improving backend reliability.
- Logged and tracked defects end-to-end in Azure DevOps, collaborating with developers to reproduce and verify fixes.

Project: CUOB UI – Frontend Automation (parts.cat.com / Dealer Portal)

- Architected a scalable UI automation framework using Playwright (Java) following the Page Object Model design pattern.
- Implemented parallel test execution, dynamic waits, and retry mechanisms, reducing flaky test rate significantly.
- Automated role-based workflows and email-triggered user creation flows for dealer portal, reducing validation time by 40%.
- Migrated legacy SIT automation pipelines from Azure Pipelines to GitHub Actions, improving build reliability and visibility.
- Performed log-level validation using AWS CloudWatch for production-level debugging and root cause analysis.

EDUCATION

Bachelor of Technology – Computer Science

2019 – 2023

Sri Venkateswara College of Engineering, Tirupati

KEY ACHIEVEMENTS

- Identified and validated 100+ high-impact UI & API defects across enterprise Caterpillar applications (Customer Master, CUOB, Foresight).
- Migrated legacy SIT automation pipelines to GitHub Actions, improving build reliability, run visibility, and team productivity.
- Reduced manual regression effort by 60% through end-to-end API automation using Karate integrated with Azure DevOps pipelines.
- Designed secure JWT/OAuth authentication workflows for automation, improving test reliability across authenticated enterprise APIs.
- Reduced UI validation time by 40% through Playwright-based parallel automation of dealer portal workflows.
